CMOS DUAL MONOSTABLE MULTIVIBRATOR

FEATURES

- Two Independent Multivibrators on One Chip
- Triggerable from Leading- or Trailing-Edge Pulse
- Retriggerable
- Resettable
- Q and $\overline{Q}$ Buffered Outputs Available
- Wide Range of Output Pulse Widths

DESCRIPTION

The 4528B Dual Multivibrator provides stable retriggerable/resettable one-shot operation for any fixed-voltage timing application. Timing for the circuit is controlled by an external resistor-capacitor combination (R_X-C_X). Adjustment of these components permits generation of output pulse widths from nanoseconds to minutes. Leading-edge and trailing-edge Trigger inputs are provided, and both positive-going and negative-going pulses are available from complementary outputs.

Timing pulses may be terminated at any time by applying a low logic level to the Reset input C_D.

Notes:

There is no effective maximum limit on R_X; recommended minimum value for R_X is 1KΩ. There are no restrictions on the value of C_X.

For proper operation all unused inputs should be tied to a logic level. The mode point (T2) of a unused half of device should be tied high through an external resistor to V_{DD}.
